

HARIS WAHEED BHATTI

LLM Evaluation and Adversarial Testing | English and Urdu

Ljubljana, Slovenia | +386 69 437 910 | harisw95@gmail.com

linkedin.com/in/bhatti25 | github.com/alfarseniko

PROFILE

Engineering graduate, bilingual in English (C2) and Urdu (native), whose Master's research was a systematic LLM evaluation study. Designed the evaluation harness and benchmarked an adaptive querying agent against a published baseline under matched conditions across 23 datasets and 367 questions, raising answer accuracy by 33 percentage points and source transparency from 12.5% to 99.7% through prompt design alone.

PROJECTS

BIMGraphExplorer – LLM agent and evaluation study | Python, MCP, LLM-as-judge 2026

- Built an adaptive querying agent exposing four read-only tools over the Model Context Protocol, then designed the evaluation harness used to measure it.
- Raised answer accuracy by 33 percentage points and source transparency from 12.5% to 99.7% through prompt design alone, isolating prompt changes as the only variable.
- Benchmarked against a published baseline under matched conditions: same model, same validated judge, 23 datasets, 367 questions, 15 projects. Reported the losses as well as the wins, at 72.0% overall accuracy against the baseline's 82.3% while reaching source-transparency parity and outperforming it on 5 of 23 datasets, by up to 24 points on one.

ifctoneo4j – Python package (PyPI) | Python, IfcOpenShell, Neo4j, Cypher 2026

- Open-source library converting IFC models (IFC2X3, IFC4, IFC4X3) into Neo4j property graphs aligned to Linked Building Data ontologies, with no RDF intermediate. Published to PyPI: `pip install ifctoneo4j`.

EDUCATION

MSc, European Master in BIM (BIM A+) | UL FGG, Ljubljana, Slovenia Oct 2025 – Jul 2026

- Field of study: Information Management in Construction. Completed the accelerated thesis track, finishing full MSc requirements in 10 months. Final grade 9.27/10.
- Thesis: *Graph-Mediated LLM Exploration for IFC Question Answering: A Benchmark Comparison Against Direct-IFC Approaches*. Supervisor: Prof. Žiga Turk. hdl.handle.net/20.500.12556/RUL-185169
- Thesis work centred on LLM evaluation methodology: evaluating with a validated LLM judge, holding model and dataset fixed to isolate the variable under test, and reporting per-dataset results rather than headline averages alone.

BE Civil Engineering | NUST, Islamabad, Pakistan (English-medium). Final grade 3.25/4.00 ... Sep 2020 – Jun 2024

EXPERIENCE

Software Engineering Fellow | Headstarter AI (remote) 2024

- Built AI-powered applications in Python and JavaScript over a 7-week fellowship, including weekend hackathon projects and a capstone application.

Research Intern (remote) | Southern Illinois University Edwardsville, USA July 2023

- Synthesised academic literature to support a faculty-mentored research proposal.

SKILLS

AI Evaluation & LLM: LLM evaluation and benchmarking, evaluation harness design, LLM-as-judge evaluation, prompt design and ablation, structured error analysis, agentic systems, Model Context Protocol (MCP), RAG

Programming: Python, TypeScript, JavaScript, Neo4j, Cypher, Git

Writing & Reporting: Reproducible benchmark reporting, technical documentation, published open-source package (PyPI), academic writing

Languages: English (C2), Urdu (native, C2), Slovene (A1, actively learning)
